DAU-20-S-1	862	242	1779			15 L
DAU-20-S-2	967	242	1901			15 L

Description

DAU-20-S (Sub-floor Accumulator Unit) consists of water cylinders fully interconnected and powered by a pressurized nitrogen cylinder(s). The nitrogen cylinders are not supplied as local cylinders are recommended because of the varying national regulations. In stand-by situation, the water cylinders and the piping system are not pressurized. Upon actuation the unit will discharge on a continuous basis for the duration of discharge through the stainless steel piping and the HI-FOG sub-floor smoke scrubbing equipments.

The system activation can be done remotely or manually depending on the actuator valve. Once released, the nitrogen forces the water from cylinders to piping system and to spray heads. The discharge is normally designed for a 10 minute period.
